

ARGOS

Improvements and future of the constellation

GTMF 16/11/2018

Sophie Baudel
Yann Bernard
Stéphane Lauriol

ARGOS : *an International governmental collaboration satellite system dedicated to environmental monitoring*

Main advantages:

- ✓ Dedicated frequency
- ✓ Doppler positioning (GPS free)
- ✓ Low powers (0,1 to 2 watts)
- ✓ Data collection (GPS, $T^{\circ}\text{C}$, etc.)

16 000 active transmitters

11 000 scientific platforms

4 000 fishing vessels

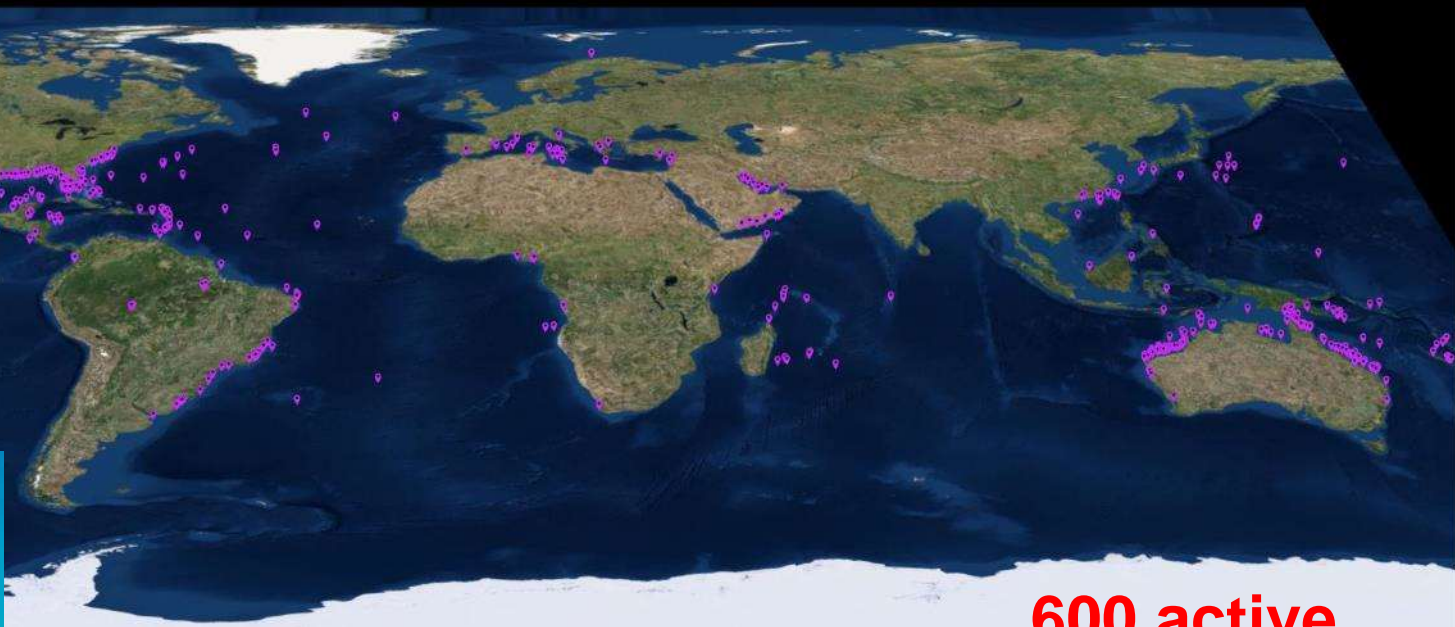

1 000 ships & other use

8167 animals tracked last month

Argos & sea turtles

**600 active
transmitters last
month**

Argos & sea turtles (11 years of data)

Positions
7 200 000

Platforms
8 100

Programs
440

Argos services: Highlights

- ✓ **New price since 1/1/2018: max 63€ / month / platform**
- ✓ **One year online: visualization & download with oceanographic data**
- ✓ **Kalman smoother reprocessing**

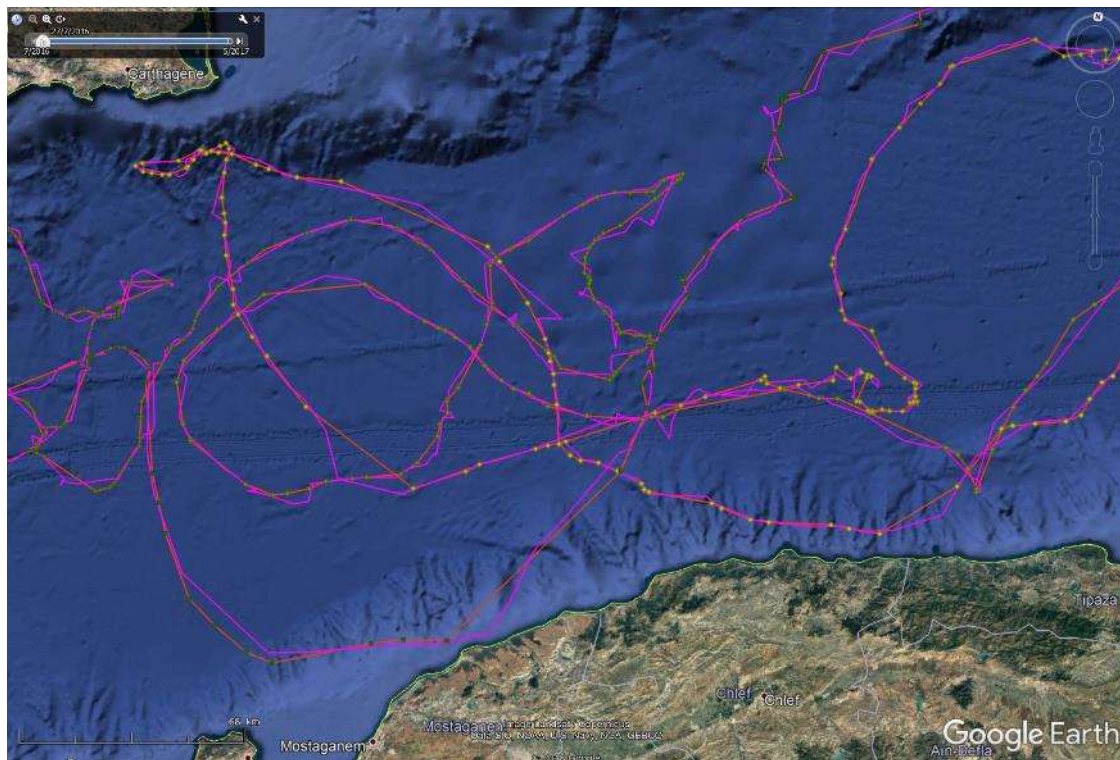

Primary productivity

Kalman smoother

Reprocess online Argos
Doppler locations (from
01/01/2008)

- GPS ●
- Kalman Filtering RT ●
- Kalman Filtering Smoother ●

Oceano data along track

Sea Surface Temperature (°C)

Primary Production (mg / m² / day)

Current intensity (m/s)

Let's talk about the **FUTURE**

2022 – Argos for next generations

- Operational in 2022
- Target is **20 operational nano-satellites**
- With an improved revisit time: **10 to 30 minutes max** between 2 satellite passes

Argos-4 for next generations

- Transmitter output power:
 - **down to 100 mWatt** (animal tracking)
- High data rate performance
- New downlink capability
 - transmit only over satellite passes
 - Send data with Acknowledgement
 - Manage remotely by commands
- Much bigger system capacity:
 - **More than 50 000 beacons** processed (16 000 today)

Argos 4 chipset

- CHEAPER AND SMALLER
- NEW APPLICATIONS (epidemiology, herd monitoring, ...)
- HYBRID TERMINALS : /ARGOS, /GSM, /Sigfox, /LORA

With Kinéis, ARGOS becomes IoT Everywhere

European Users Conference on Argos Wildlife

<http://www.argos-system.org/EUCAW/>

Join us for two days of scientific and technical sessions with the Argos satellite tracking community!

The EUCAW 2018 – European Users Conference on Argos Wildlife – hosted by CLS will take place on the 21st and 22nd of November at the auditorium of CLS headquarters, Ramonville St-Agne, near Toulouse, France.

[View agenda](#)

Enjoy the **passionate research** of your peers, **exchange best practices** and interdisciplinary approaches...

Who should attend: biologists, manufacturers, research agencies, NGOs, and Argos experts...

[Program highlights](#)

Speakers include:

- *Mads Peter Heide-Jørgensen, Greenland Institute of Natural Resources*
- *Christophe Guinet, CEBIC/NRS*
- *Alexandre Salmán, ES-PAS*
- *Francisco Alemany, ICCAT*
- *Allan Mee, Norwegian Institute for Nature Research*
- *Armelle Jung, DRDH (Des requins et des hommes)*
- *Brendan Goddard, University of Exeter*
