Habitat de
« développement »

Néritique

Habitat des
adultes

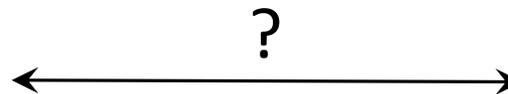

- Origine & destination post-développement?
- Tortues vertes immatures en Martinique
- Tortues vertes adultes en Guyane française

**Lien génétique entre les tortues vertes de
Guyane et celles de Martinique?**

Martinique

Immatures

Guyane

Adultes

1) Capture

1) Capture (CMR)

$n=425$

2) Mesures & Pesées

$n=425$

3) Biopsies

$n=425$

4) Pose de balise

$n=31$

D'où viennent-elles?

Analyses génétiques
 $n=40$

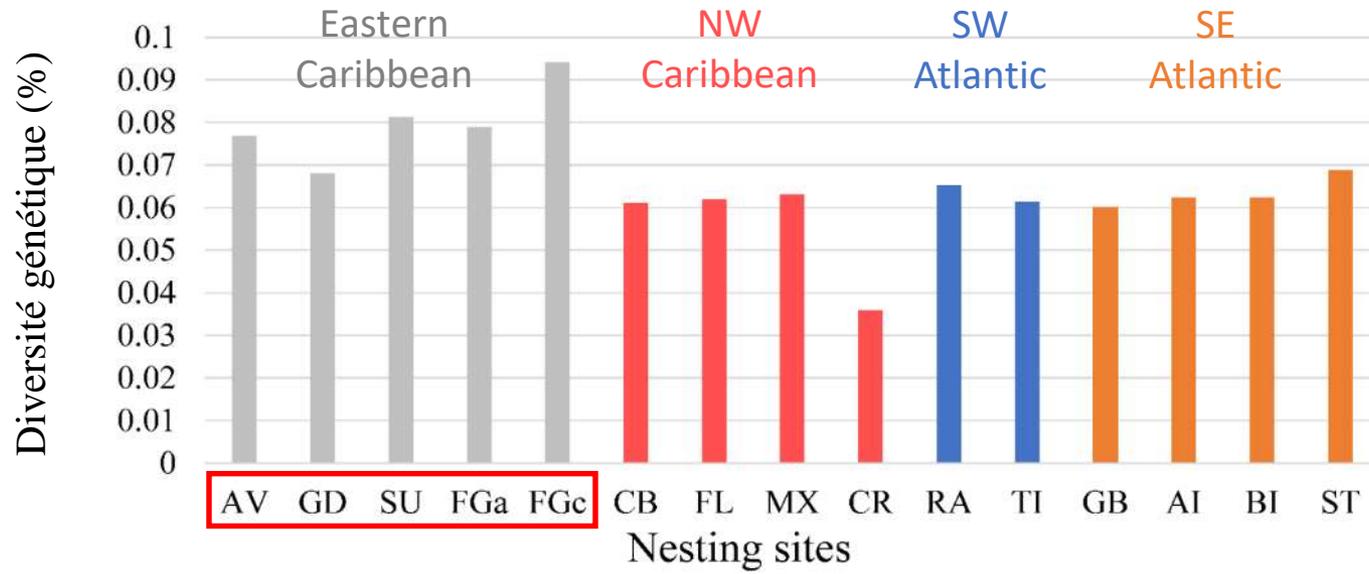

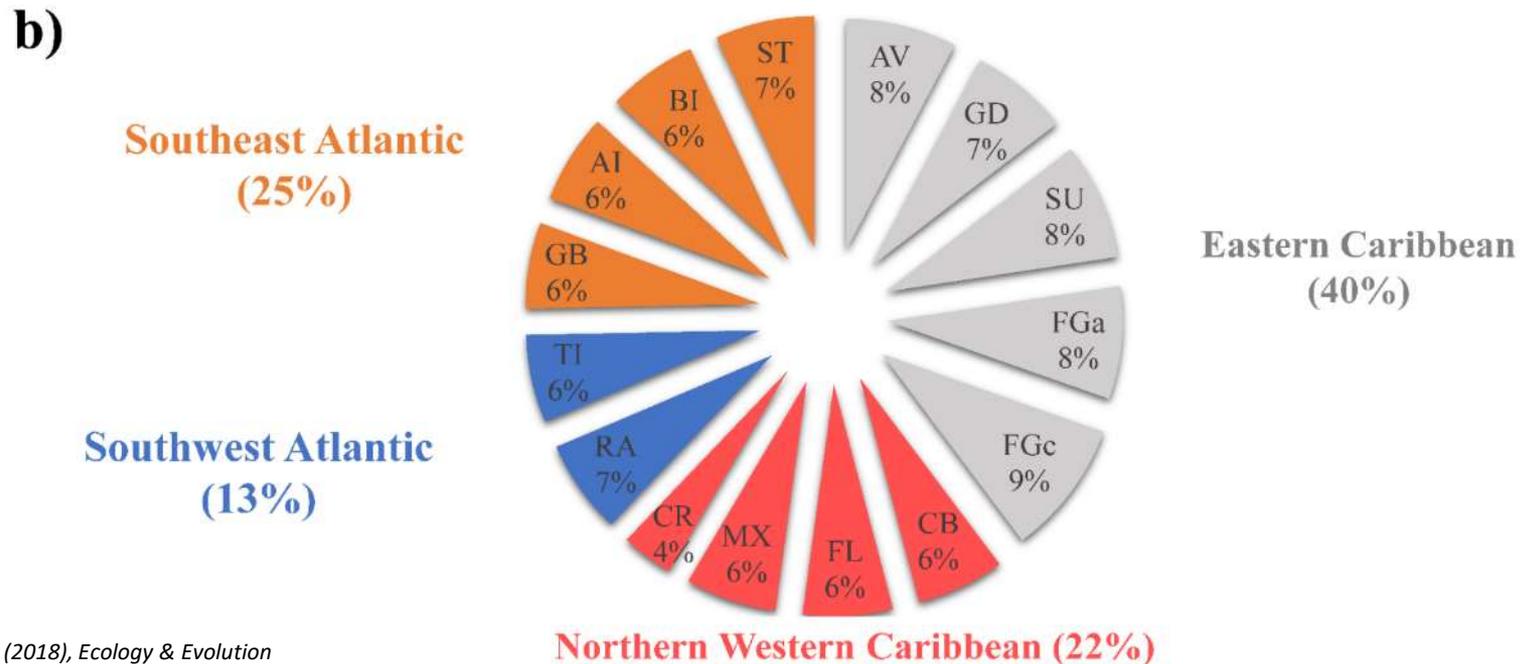

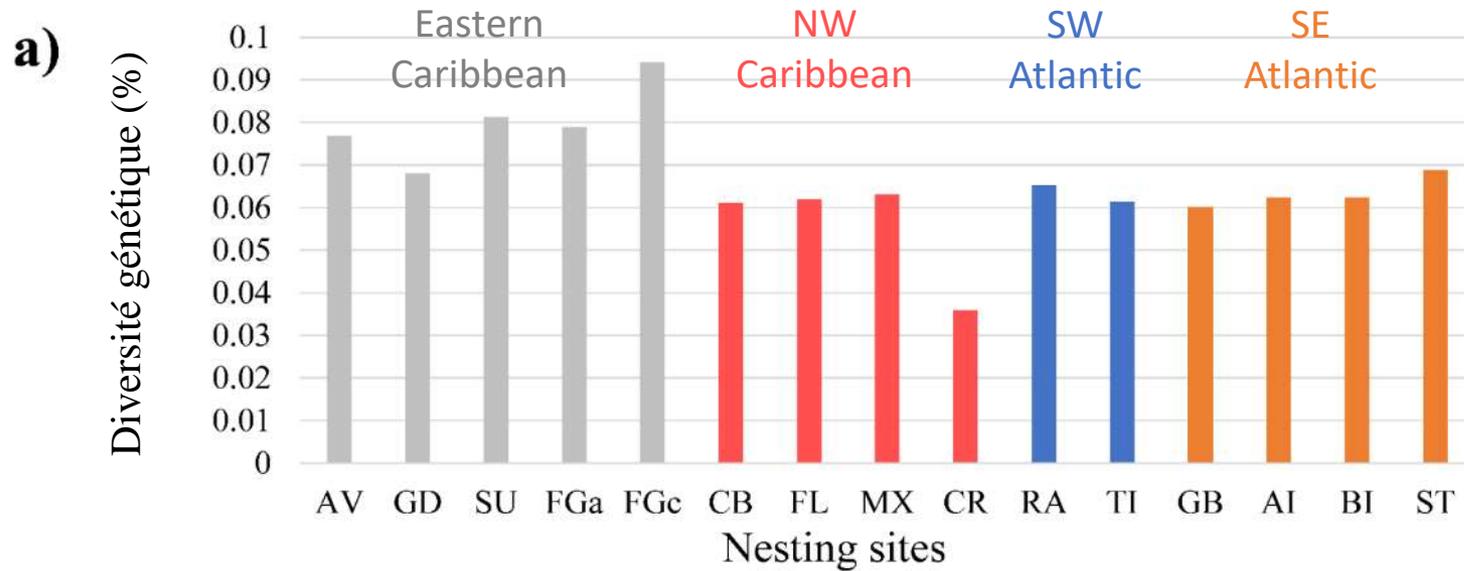

Où vont-elles?

Télémétrie satellitaire
 $n=31$

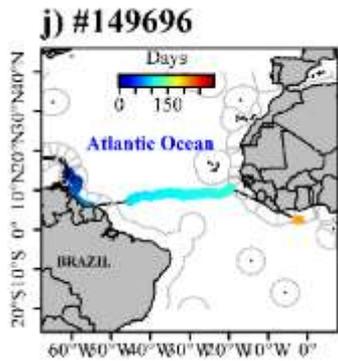

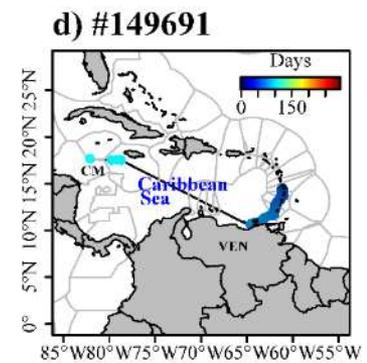

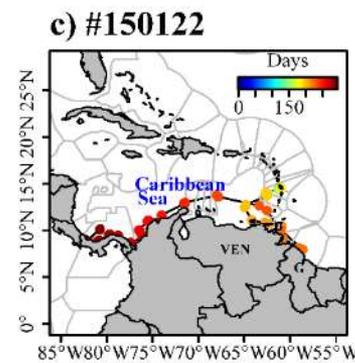

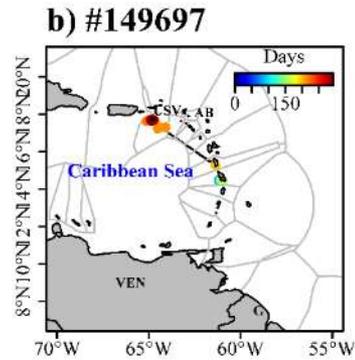

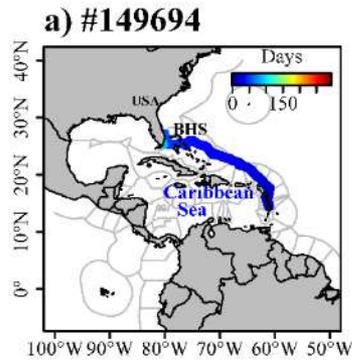

a)

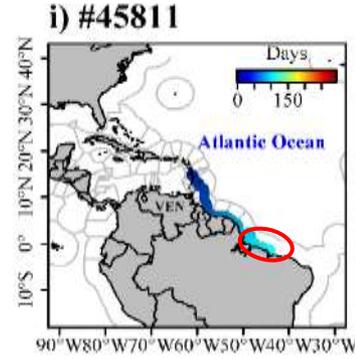

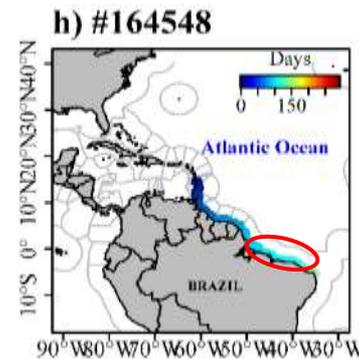

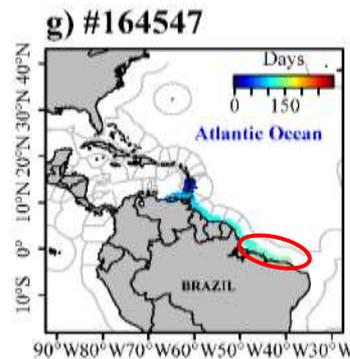

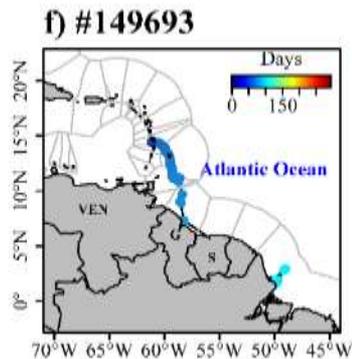

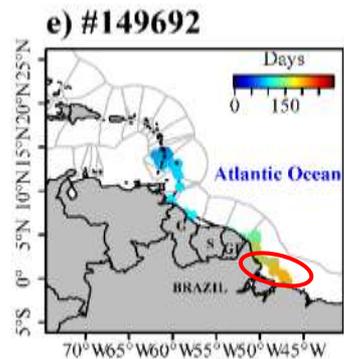

Destinations

- 10 tortues ont quitté la Martinique
- 6 directions différentes
- 1^{ère} traversée transatlantique
- 50% ont rejoint les zones d'alimentation des adultes de Guyane

Conclusions

Tortues vertes de Martinique = futurs reproducteurs de Guyane française ?

Comment la recherche d'aujourd'hui peut améliorer la gestion des tortues marines de demain ?

Ifremer

1. Dynamique spatiale côtière

- Déplacements
- Habitat
- Comportement

2. Technologie LoRA

- Balises « low cost »
- IoT Ifremer-Interreg-Réunion
- PloT Ifremer-TAAF

Projet NeXT

4. Contaminants

- Sang, écaille, muscle
- Organique & inorganique
- 3 océans

3. Génétique

- Structuration
- Connectivité

Volet 1: Dynamique spatiale & comportement

Quelle est la dynamique spatiale et l'utilisation de l'habitat à fine échelle des juvéniles sur leurs sites de développement ?

Imbriquée

Verte

Pressions anthropiques :

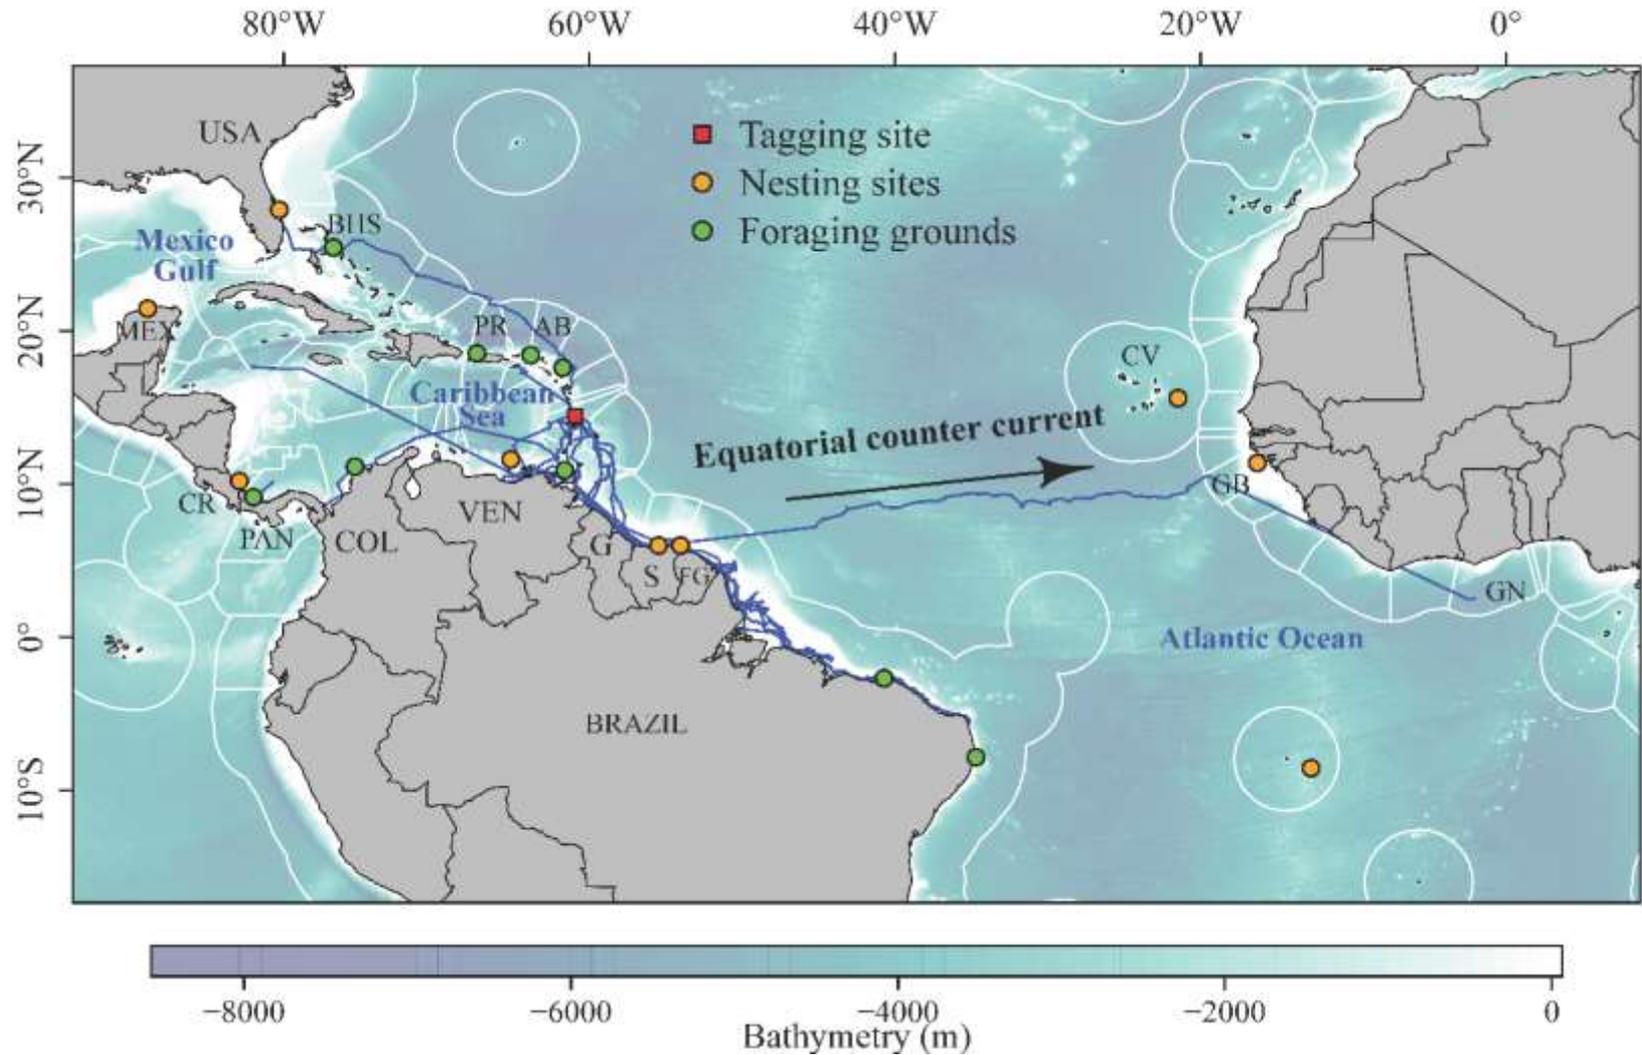

Sanctuaire marin > AMP > Anthropisé

Ecosystèmes contrastés :

Mangrove, herbiers, coraux...

Destinations

- 10 tortues ont quitté la Martinique
- 50% ont rejoint les zones d'alimentation des adultes de Guyane
